Final Report - CAMPUS PLAN - FACILITIES MASTER PLAN REVIEW & UPDATE - 2009
Los Angeles Trade Technical College

INTRODUCTION

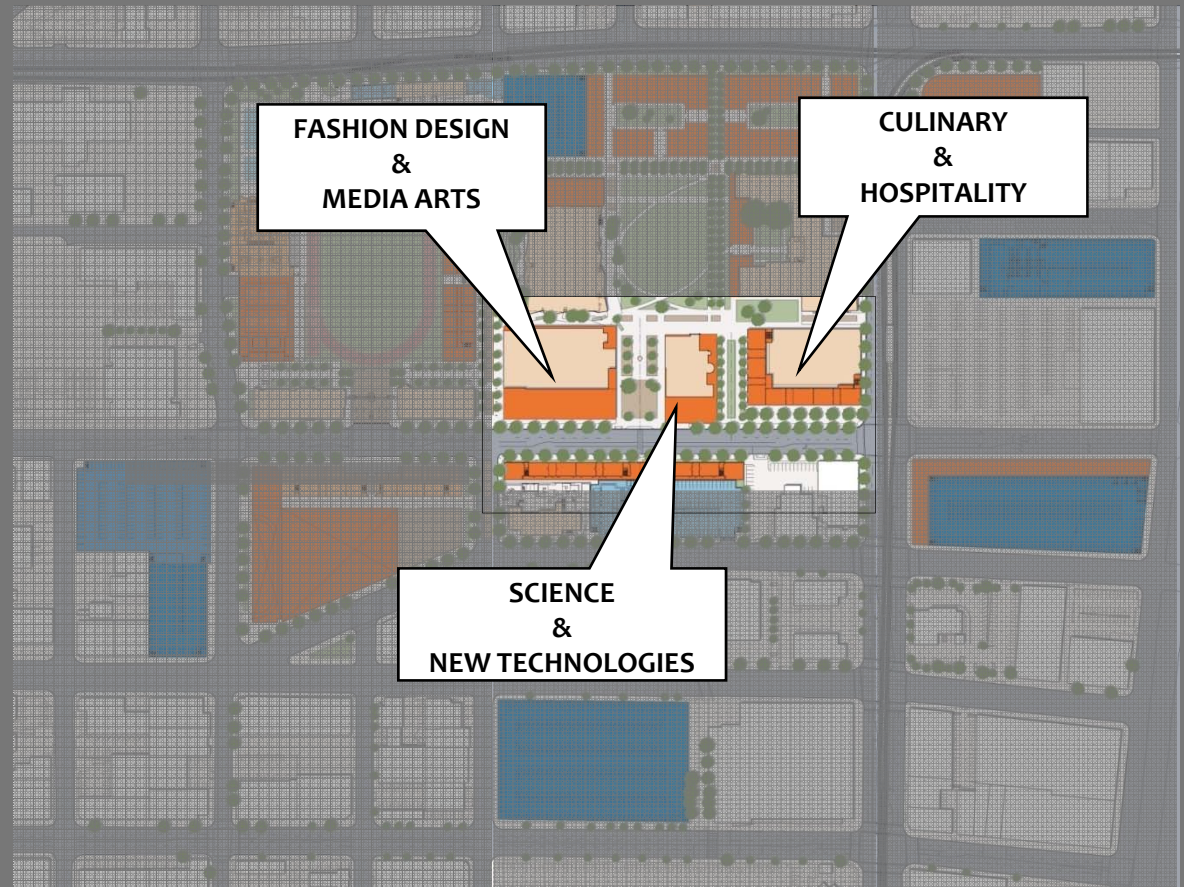

LATTC Programs. As a comprehensive community college the academic and workforce training programs at LATTC are diverse, technically demanding and require the full spectrum of facility space type including science labs, culinary instructional kitchens, exterior construction yards, exhibition venues, lecture theaters, lecture classrooms and distance learning facilities to name just a few. Many of the programs draw students from the entire District and beyond. To continue to be a regional college versus a neighborhood college with a defined service area, programs must continue to distinguish groups and not simply duplicate programs at neighboring colleges. State of the art facilities that become identified with cutting edge programs is a first important step to success in this area.
