Technology Learning Center

The new Technology Learning Center 2 building will include multiple specialized and general computer labs for computer software and hardware disciplines for the Computer Science department. This four-story, 41,000 gross square-feet building is sited on the southern part of campus.

The Technology Learning Center will also include office space for the campus safety department, faculty, staff and academic senate departments, the Westside Extension department, and the Business and Paralegal department. The building will provide critical support spaces for campus servers, technology equipment rooms, and house the campus back-up server facility, and building distribution frame.

The building incorporates unique design features such as energy efficient mechanical and lighting systems, energy management control and lighting controls, drought-tolerant native planting and water-efficient irrigation. The single-room width building allows for natural light and cross ventilation. The landscaping was designed to incorporate efficient storm water capture and reuse methods.

West Los Angeles College is an accredited California Community College offering paths to transfer to universities, career education and courses for personal or professional growth over 12,000 regular or extension students. The campus occupies 70 park-like acres overlooking Culver City, Marina Del Rey and the Greater West Los Angeles area.
